

Butt Splice Closure

Give Your Splice Low Cost / Absolute Protection

Version April 2014

Uraseal Butt Splice Cases are designed to be used indoors on telecommunications house cable or outside for fast, economical protection. These closures are constructed of a tough, rigid inner liner which will give your splice “mechanical protection.” A softer outer layer is then added to give the Butt Splice Closure an outer shell that extends beyond the base of the liner to create a water-tight seal. When the stainless steel clamp is tightened, the soft outer layer shell will then conform to either the tape wrapping or the grommet and seal the splice.

- Positive Protection
- Water Tight
- Easy Re-entry
- Re-entry in 5 min or less
- Very Economical

Time & Cost Savings

Uraseal Butt Splice Cases can be installed in about half the time required for other types of closures or tapes and for a fraction of the cost.

Easy Re-entry

This closure can be removed from and replaced on a completed splice in only 5 minutes with no special re-entry kit needed.

Watertight

The Butt Splice Case has an absolute water-tight seal.
