Uraseal's new dispensing system has the technician in mind; allowing the user to get into those hard to reach spots. When superior ground moisture control is required, Drain N' Seal® Pedestal Foam Products from Uraseal are the products of choice by communication field technicians. The unique cell structure inhibits the penetration of moisture while allowing any condensation or water build up to drain from the pedestal. This unique characteristic of the Drain N' Seal® product line makes it superior to pea rock and other foam products. If re-entry is needed, new material can be added which will bond to the existing material.

The Drain N' Seal® Moisture Blocking System is easy to use, economical and lightweight. By simply applying pressure to one side of the bag, the burst seal will separate. Mix the two components by kneading the package. The kit will be ready to use in under one minute and starts foaming immediately.

Uraseal's new dispensing system is available in 440 gram and 660 gram kits. The URF440S (440 gram) and URF660S (660 gram) kit includes: Instructions, disposable gloves and Drain N' Seal® Moisture Blocking Foam.

Certificate No. C2018-01847
